

CASE STUDY

GUIDED RECRUITMENT

Irritability Associated With Autism Recruitment Success

BACKGROUND

SubjectWell onboarded a study for treating irritability associated with autism in children and adolescents aged 5-17, which struggled to find patients for over two years. The study team lauded SubjectWell as a “tremendous help” in bringing in new patients and saw a surge of randomizations after onboarding. After just six months of recruitment efforts, SubjectWell delivered a quarter of the sponsor’s total enrollment.

STUDY: Oral Medication for the Treatment of Irritability Associated with Autism in Children and Adolescents

Phase and Status	Phase II
Contract	Purchase order for 32 randomizations
Recruiting Timeline	6 months
Referrals	625
